

6.38mm, 8.38 mm clear laminated glass

Laminated glass specification :

The laminated glass is a kind of safety glass made under high temperature by interlating PVB membrane between glasses. It can be two sheets or more than two sheets. The firm and tough bondings between PVB films and the glass makes laminated glass the safe glass with excellent performance. Vertically or obliquely installed, it can resist the external impact and prevent penetration. Once broken, the broken pieces will still be stuck with the middle coatings so as to avoid human injury or property loss because of glass falling. Moreover, the whole glass still keeps its integrity and can continue to resist impact and provide a shelter from wind and rain.
